Email: jpietrowski@wpnj.us

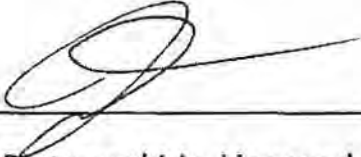

Good afternoon,

The Woodland Park Water Department purchases 100% of the water in our system from Passaic Valley Water Commission. During the second half of 2021 (July 1, 2021 – December 31, 2021), PVWC was issued a Notice of Violation from the New Jersey Department of Environmental Protection (NJDEP) for their Corrosion Control Program, which includes pH as a regulated parameter.

During the same time period, Woodland Park received a Notice of Violation from the NJDEP for samples from our system measuring below the required 7.0 pH.

Although we are required to issue the following public notification per NJDEP standards, there are currently no health and safety concerns regarding our water system.

Any further questions may be directed to Robert De Block from De Block Environmental at 973-998-9100.

John Pietrowski Jr, Licensed Operator

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Woodland Park Water Department Fails to Meet Water Quality Parameter (WQP) Levels

Our water system recently violated a drinking water standard. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we did (and are doing) to correct this situation.

During the 6-month monitoring period of July 1, 2021 to December 31, 2021, we failed to consistently meet treatment technique requirements for our corrosion control system. WQP results did not meet the optimal WQP control values set by the State 30 days in the 6-month monitoring period, and the system cannot be outside the values set by the State for nine or more days.

What should I do?

Listed below are some steps you can take to reduce your exposure to lead and/or copper:

- Run water to flush out lead and/or copper. Run water for 15 – 30 seconds or until it becomes cold or reaches a steady temperature before using it for drinking or cooking, if it hasn't been used for several hours.
- Use cold water for cooking and preparing baby formula. Do not cook with or drink water from the hot water tap; Lead dissolves more quickly into hot water. Do not use water from the hot water tap to make baby formula.
- Do not boil water. Boiling water will not reduce lead and/or copper levels.
- Use alternate sources or treatment of water. You may want to consider using bottled water for drinking and cooking or a water filter designed to remove Lead. Read the package to be sure the filter is approved to reduce Lead or contact NSF International at 800-NSF-8010 or www.nsf.org for information on performance standards for water filters. Be sure to maintain and replace a filter device in accordance with the manufacturer's standards to ensure water quality.
- Get your child tested. Contact your local health department or healthcare provider to find out how you can get your child tested for lead if you are concerned about lead exposure.

What does this mean?

This is not an emergency. If it had been, you would have been notified within 24 hours.

However, infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal physician.

If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

What is being done?

Woodland Park is required to keep their pH between a 7.0 – 8.0. We have developed a program to more closely monitor the pH of the drinking water we receive and distribute from the Passaic Valley Water Commission. All sample results in the new monitoring period, which started January 2022, have fallen in the acceptable range.

Our lead and copper sampling requirements were recently increased to twice per calendar year. We are currently in the first round of forty samples for the first half of 2022. Results for 35 of the samples collected thus far have been non-detect for Lead, and we are well on our way to updating our sampling plan to better protect the customers on our system, and continue to strive to satisfy our DEP permit, and the standards set forth within.

For more information, please contact Robert De Block from De Block Environmental Services, LLC at 973-998-9100.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by Woodland Park Water Department. State Water System ID#: 1616001.

Date distributed: April 22, 2022
